

Designing Terrazzo Samples for Projects

EXPLORING THE DIFFERENT OPTIONS OF EPOXY TERRAZZO

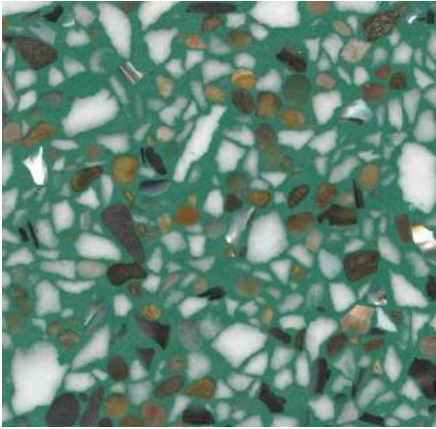

1.) SELECT ANY COLOR

Color is a main advantage of epoxy terrazzo. Choose any color from a wide color palette. Epoxy terrazzo maintains its boldness over a floor's lifecycles. Also, offers more vibrant choices than cementitious terrazzo, which is limited to pastel and darker colors

2.) SELECT AGGREGATE

While traditional terrazzo uses marble chips, epoxy terrazzo expands the choice of aggregates from marble, glass, Mother of Pearl, plastic and metals in combination with an epoxy terrazzo binder.

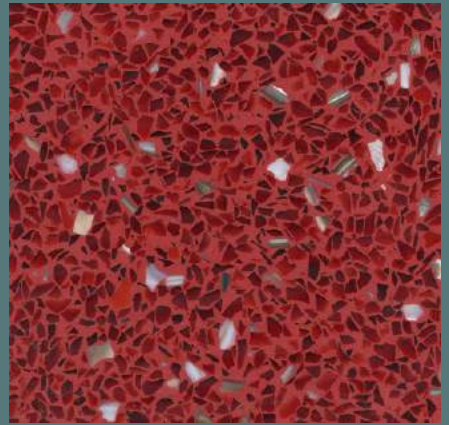

3.) SELECT CHIP SIZE

Aggregates are graded according to size. Choices include micro aggregate, standard size aggregates, and Venetian aggregates.

4.) SELECT GRIT LEVEL

Determine how much polish you would like to add to a sample. The higher the grit level, the more glossiness added to the finished sample.
